Bearmach Parts and Accessories Catalogue – Edition 19

Since 1958, we have been supplying quality assured Bearmach branded parts and accessories for Land Rover vehicles. Bearmach has introduced 750 new products per year, in addition to our total range, exceeding 14,000 parts and accessories, to over 140 countries worldwide. Bearmach's competitive prices, coupled with a focus on quality, ensure you pay less for quality assured Bearmach branded parts. We constantly monitor prices to ensure we continue to offer you competitive, quality products.

3 Year Warranty

We are so confident in the quality of our Bearmach own-branded range of products, that we are now offering an extended 3-year warranty on them.

For your peace of mind, Bearmach products go through rigorous testing to ensure they meet our strict quality standards. This extended guarantee is a major step forward in the aftermarket supply of parts for Land Rovers, and from 3rd January 2017 will cover all items within Bearmach's own-branded aftermarket range. Wherever you see the Bearmach 3-year warranty logo in the catalogue, this warranty covers the products. Find out more at www.bearmach.com. (Restrictions apply.)

How will we do this:

If any part is found to be defective following an inspection by our quality team in the first 12 months after purchase, due to faulty materials or workmanship, then we will repair or replace the unit free of charge or issue a full refund. In the second and third year of warranty – a free of charge replacement will be issued.

- This offer is subject to our terms and conditions.
- Proof of purchase is required by the original point of purchase.
- This offer excludes Genuine Land Rover parts, reconditioned gearboxes, engines and transmissions.
- This guarantee does not affect your statutory rights.

Revotec Fan Kits

The latest fan and controller technology used together for the ultimate cooling package.

Revotec's bespoke cooling kits have been carefully developed to provide perfect cooling for your Land Rover. Overcoming all mechanical fan shortcomings, upgrading to an electric fan increases fuel economy, reduces engine warm-up time and ensures sufficient engine cooling and protection in modern traffic.

Supplied with all the necessary fittings, fan and controller to complete an electronic fan conversion on your vehicle.

Revotec Electronic Fan Controller

- Adjustable temperature control range of 70°C - 120°C.
- Instant response.
- No interruptions of radiator hose seals or damage to spout.
- Simply installed in a radiator hose with no leaks.
- Fitted in minutes.

Engineered Brackets

- Vehicle specific brackets.
- Laser cut.
- No permanent modifications required.
- Engineered to fit perfectly.

COMEX Cooling Fans

- Lightweight.
- Low noise.
- Finger guard.
- Multiple mounting options.
- Balanced blades.
- Bearing motor.
- High output long-life design.
- Rated to run continuously.
- Waterproofed to IP68.

COMEX axial fans have been developed to deliver high performance and long life. Each motor is fitted with bearings and is water/dust proof to IP68, making them ideal for all working conditions.

Differential Air Locker 10 Spline

ARB

BA 205

To suit Rover differential. 10 spline. A manually lockable differential, which is operated at the driver's discretion by the push of a button. Locking and unlocking of the 'diff' is extremely rapid and can be achieved at any vehicle speed. Installation involves bolt in replacement of the original equipment differential centre. An air compressor and in-vehicle switch can be fitted to both front and rear axles without compromising on-road performance. Please specify spline type when ordering. NOTE: All A.R.B. Diff Lockers require a compressor which is available separately. order ref: BA 215.

Detroit Diff Locker Introduction

The Detroit Locker is a fully automatic locking traction differential that is well known for premium performance and dependable operation. Preload devices between the side gears deliver 100% torque and power to both drive wheels yet unlock automatically to permit necessary wheel speed differentiation. The Detroit Locker is trouble-free as it does not require service adjustments or special lubricants. Easy to install, no special tools or case modifications required.

Detroit Truetrac Introduction

This unit features a gear-type limited slip design (no clutch or friction plates to wear out). Its positive gear action automatically splits the torque with none of the steering problems associated with other traction 'diffs'. Power transfer is so smooth that it is unnoticeable through the steering wheel when fitted in front drive steering axles. It performs as a standard differential on normal highway driving - then automatically engages when needed in when, muddy or icy conditions.

BA 5250

Speedo Correction Kit

ASHCROFT

BA 5250

The TD5 and 2.4 and 2.2 TDCi Defenders have a green 3 wire transducer fitted behind the handbrake backplate to the speedo drive gear. This generates a pulse which is sent to the dash clocks to show the vehicle speed if you fit different size tyres or different ratio ring and pinions in the diffs then this speed displayed may well be inaccurate. This small device is very easy to install and program and allows you to adjust the output pulse both up and down which means the dash clocks see the correct pulse and thus show the correct speed. Remove the centre seat cover and look for the small 3 wire loom coming from the speedo drive transducer this loom joins a fat loom at the top of the transfer case We would suggest fitting the controller under the Right hand seat and running the 4 wire loom alongside the fat loom to the top of the transfer case then join the 4 wires to the 3 wires before they enter the big loom as follows :Join the Red wire to the White/Green Join the Black wire to Black wire cut the Black/Red and join the transducer side to the White join the other side of the Black/Red to the Green wire note the colours of the genuine 3 wires above are from our 2007 2.4 TDCi defender plug on the green transducer White/Green = Black A = Black/Red.

Shock Absorbers

We are pleased to introduce our Bearmach Shock Absorber range. Developed over 36 months with a world-recognised manufacturer, we can offer standard oil and upgraded gas ranges of shock absorbers.

Bearthmach Shocks offer:

- Covered by Bearmach's 3-year extended warranty.
- Advanced control for a comfortable ride and precise handling.
- Multi-lip high pressure seals, preventing leaks, and designed to permanently seal the oil or gas inside the shock.
- Heavy-duty twin-tube construction technology.
- Heavy-duty, reinforced, double-welded mountings for long term durability.
- Bearmach shock absorbers are ideal for standard or raised height Land Rovers.
- Severe Off Road Vehicle Compliant 4WD suspension components.
- Comes with heavy duty bushes and cup washers.

Bearthmach Hydraulic Charged Shock Key Features:

The Bearmach Hydraulic Shocks use the same hardware as the Bearmach Gas Shocks. So, they are a very good quality oil / hydraulic shock.

- Premium grade oil used to withstand high operating temperature and continued rigorous use.
- Large 35mm bore and piston is greater than most original equipment size and provides an increased oil capacity for greater ride improvement.
- DU® bushed pilot bearing - means better support for the shaft, greater side load capabilities and less strain on the top seal. This prolongs the life of the unit and lessens the possibility of hydraulic oil loss.
- Designed with prolonged life expectancy.

Bearthmach Gas Charged Shock Key Features:

The Bearmach Twin Tube Gas Shocks are a PREMIUM quality nitrogen charged gas shock

- Extensively tested and proven over the toughest off-road terrain over a 2 year period.
- Reduces roll of vehicle when turning.
- Will help support some of the vehicle's weight, while offering better control at higher demands and speeds.
- Less prone to overheating.
- 35mm sintered iron, one piece, PTFE banded piston.
- DU® bushed (metal composite with steel back, sintered bronze & PTFE) bearing.
- Disc valve system used in the piston & foot valve.
- Bearing slip ring to provide immediate performance and no "bleed back".
- These shocks offer the best of both worlds with excellent on road handling & ride with great off road performance.
- Nitrogen gas pressurised – reduces shock fade – making shocks work longer and harder.
- Designed with prolonged life expectancy.

Geomet® Coated Brake Discs

Bearthmach's new brake disc range is GEOMET® coated, which provides high performance braking without any negative influences on braking characteristics. The GEOMET treatment will prevent rust pitting and corrosion damage even after repeated heat cycles of 350°F for 96 hours. It will also resist a salt spray test for longer than 480 hours. Geomet is fast becoming the new standard treatment finish being specified and applied by OEM manufacturers.

Benefits

- Covered by Bearmach 3-year extended warranty
- Solvent-free coating.
- Provides protection against damp, moisture and rust, therefore extending the life of the disc.
- Environmentally friendly - toxic free and contains no chromium, nickel, cadmium, lead, barium, or mercury.

Cross Drilled & Grooved Brake Discs

Bearthmach's new cross drilled and grooved brake disc range are designed to allow gases to escape that build up between the brake pad and the brake rotor. This allows your brakes to run cooler and stop better.

Benefits

- Covered by Bearmach's 3-year extended warranty
- Reduces braking distance
- The drilled and grooved feature cleans the surface of disc, allowing gases to escape from the pad more effectively
- Increased friction force, enables more active braking
- Much more resistant to brake fade, because the heat can be vented away from the pads more easily
- Decreased risk of tyre blow outs by keeping the hub cooler

Split Charge Monitor

T MAX

BA 26850A

A complete split charge system with battery monitor, designed for a dual battery system. The monitor displays the stored energy of both batteries along with the charge voltage while charging them with an alternator, solar panel or any other 12v source. The batteries are automatically linked through a 250A continuously rated solenoid when a charging voltage of over 13.3v is detected. The batteries are isolated when discharging. In emergency situations a manual override function to link the batteries can be actuated. Useful for extra power when winching or to start the motor if the main battery should be discharged.
